comfort and safety

complete assortment

We work on new innovations everyday to give our customers the best possible products. Next to the separation walls we provide our customers with customized polyester products. With an eye for perfection we will be happy to advise you to the smallest detail.

B-pillar partition wall

The B-pillar partition wall of ABK Kunststoffen prevents sliding or falling loads. This guarantees the safety of the driver and front passenger. The extra depth of the partition wall provides more comfort and the B-pillar can, depending on the type of car, be lined on one side or even double-sided. This will reduce the noise from the cargo area. In addition, the product meets the CE standards. Finally, the temperature in the cabin can be better regulated after separating the cab and the cargo space.

Continuously up-to-date assortment

ABK Kunststoffen can quickly switch to the customer's wish; design, production and mounting are all on the same place. Because of this we can offer a short delivery time and the assortment remains up to date and in development.

ABK Kunststoffen will make a matching separation wall or cabin when a new car is added to the market. Options such as fabric and windows can be adjusted as desired.
